INDAVER

INDAVER

“At Indaver you can go for anything and that’s nice to know”

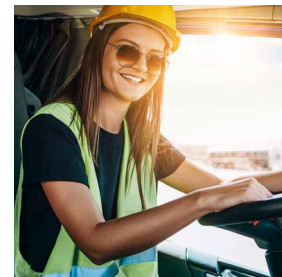

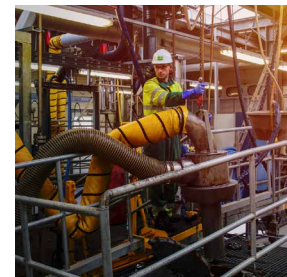

Mark Dumez, independent driver Dumez Transport on behalf of Bertschi

INDUSTRIAL TANK & PROCESS EQUIPMENT CLEANING

TANK DISCHARGED? CLEAN YOUR TANK!

Fast, safe and professional with state-of-the-art techniques. With respect for the strict requirements of permits, shippers and health and safety regulations.

Time is money

Coffee, lunch or shower ... while you wait

You are assured of a customized and fast cleaning so you can quickly schedule other new transports. Convenient, because the ports are close by.

- Short lead time
- Safe execution

Time for a coffee, a lunch or a shower? Drivers love that. They make good use of their precious time. Fresh and well-rested back on the road!

Full relief

- Cleaning on a dedicated site
- Professional approach
- Geographical proximity to port and industry
- Everything in-house to dismantle installations and clean difficult parts - think pipe bundles and heat exchangers internally and externally
- Economies of scale save you time and costs
- Your production process is only shut down for a short time
- Safe processing of the rinse water

Safe (on-site) processing of rinse water

After the cleaning process, just discharge wastewater into the water board sewer or into nature? That is out of the question.

Indaver is therefore equipped with the most advanced wastewater treatment techniques. Among other things, we carry out additional treatment of the first contaminated rinse water in our biological water treatment plant.

Result: the purified water is suitable for use in production processes or water-treatment plants.

Total service: tests and repairs

After cleaning, there is another step. We carry out leak and vacuum tests on the containers and inspect them. On site, we carry out specialised surface treatments or minor repairs on tank containers, rail wagons or IBCs.

Do you need container repair and inspection? We offer those too, in cooperation with partners. As a transport customer, you are entitled to a total service - fast, efficient and market competitive.

Fast and safe cleaning

Professional, safe and fast cleaning of your tankers or process equipment in the busy logistics port axis of Zeebrugge, Ghent, Terneuzen and Antwerp? You can be sure of that at Indaver in Terneuzen. We clean tankers with hazardous cargo or (waste) substances and we can handle a wide range. Rely on thorough and customised cleaning. What about residues after cleaning your equipment? We ensure safe processing.

Professional spray

Do you have an industrial company? Then you are welcome on the same site with your process equipment at our professional clean spraying site. This cleaning facility is embedded in a larger Indaver site for the storage and processing of waste. Rest assured, all infrastructure is in place.

Experienced partner

With industrial cleaning, you get professional guidance. We have extensive experience with clients in chemicals, pharmaceuticals and refining. We are also familiar with any type of tank content. Work safe: entrust us not only with the safe (ADR) disposal and/or processing of your residues.

Safety for all.

A cleaning activity always implies a risk to people and the environment. Take advantage of our expertise in tank cleaning. Safety first, always efficient.

Your tank is contaminated

with specific products and you don't know what to do?

Our staff will be happy to help.

Sustainable techniques

- Safe and circular way of cleaning
- Low carbon footprint thanks to solar technology on site

Team Indaver

Our team consists of experienced people with extensive technical knowledge. We quickly provide you with the right tailor-made solution. With our approved equipment, we comply with all applicable strict safety standards.
